

MANUSCRIPT PREPARATION

In the preparation of the manuscript, care shall be taken to ensure that the following specifications are followed:

Paper and Printing Specifications

Print the final copy with a laser printer using only one side of a standard-sized PUP template (8.5 x 11 inches).

Font Specifications

Use 11-point Arial font throughout the thesis or dissertation except when compressing a large table.

Spacing

Double space the text; single-space long quotations, table and figure captions, and similar special materials (e.g., table legend). Type triple-spaced from the top margin, centered, boldfaced, and in ALL CAPS all headings of the preliminary section (except the Copyright Page and Title Page) and all chapter titles.

Margins

Leave 1.5 inches for the left margin to allow for binding and trimming and 1 inch for the top, bottom, and right margins.

Page Numbering

Paginate the preliminaries by using lowercase Roman numerals at the center, bottom margin.

Use Arabic numerals to paginate the text, references, and appendices. Number all the pages consecutively starting at number 2 on the second page of the first chapter. The first page of each chapter, though counted, shall not be numbered.

The Text or Body of the Paper

Below is the format of five levels of heading that will be used in writing the text or body of the paper.

Levels	Format
1	Centered, Boldface, Title Case
2	Flush Left, boldface, uppercase, and lowercase heading
3	Indented, boldface, lowercase paragraph heading ending with a period.
4	<i>Indented, italicized, boldface, lowercase paragraph heading ending with a period.</i>
5	<i>Indented, italicized, lowercase paragraph heading ending with a period.</i>

See example on the next page.

Method (Level 1)

Participants (Level 2)

Participants were 80 university students (35 men, 45 women) whose mean age was 20.25 years ($SD = 1.68$). Approximately 70% of participants were European American, 15% were African American, 9% were Hispanic American, and 6% were Asian American. They received course credit for their participation.

Procedure (Level 2)

Recruitment. (Level 3)

Session 1: Psychiatric diagnoses. During the initial interview session, doctoral level psychology students assessed participants for psychiatric diagnoses. Eighteen percent of the sample met the criteria for generalized anxiety disorder according to the Structured Clinical Interview for *DSM-IV* Axis I Disorders (First, Gibbon, Spitzer, & Williams, 1996). (Level 3)

Session 2: Assessments. All participants attended a follow-up session to complete assessments. Participants were instructed to bring a friend with them who would complete the other-report measures. (Level 3)

Self-report measures. (Level 4)

State and trait anxiety. (Level 5)

Rejection sensitivity. Participants took the Rejection Sensitivity Questionnaire (RSQ; Downey & Feldman, 1996), an 18-item self-report measure that assesses rejection sensitivity. (Level 5)

Chapter and Subheadings

1. Begin each chapter on a new page.
2. Capitalize only the first letter of the heading **Chapter** but type in ALL CAPS and centered the title of the chapter. Both the chapter heading, and the title are typed in bold font.
3. Use Arabic numerals for the chapter numbers.
4. Type triple-spaced from the top margin and centered the chapter number heading.
5. Type double-spaced below the chapter heading the title of the chapter.
6. Type the subheading or the first line of the introductory paragraph of the chapter (if there is no subheading) three spaces below the chapter title.
7. Type subheadings of a chapter in a bold face, flush with the left margin, capitalizing only the first word, all major words, and prepositions of five (5) or more letters e.g., **Introduction**. Subheadings do not have any end punctuation.
8. Start another subheading with one triple space (or three spaces) below the last line of the immediately preceding paragraph.
9. Have at least two full lines below a subheading at the bottom of a page, or else carry over the subheading to the next page.
10. See example on the next page.

Chapter 1

THE PROBLEM AND ITS SETTINGS

Introduction

This is the first paragraph stating the opening statements about the main topic leading to your specific topic.

This is your second paragraph discussing the specific topic leading to your main problem. Present your main problem on this paragraph.

This is the third paragraph present your evidence/s here as proof that the problem really exists (cite source/s information). Causes and effects of the main problem.

Theoretical Framework

This study is grounded in the Theory of Information Systems Success, which posits that the success of an information system is determined by its quality, user satisfaction, and its impact on organizational performance. According to this theory, a system's effectiveness can be measured by its functional suitability, performance efficiency, usability, and other quality attributes. This theoretical perspective will guide the evaluation of the web-based information system's effectiveness.

Definition of Terms

1. Only the variables or key terms included in the study shall be defined.
2. Acronyms need not be defined if their meanings have been mentioned in the text.
3. A term shall be defined operationally (i.e., how it is used or measured in the study), or theoretically/technically (i.e., how it is defined in published resources).
4. Definitions taken from a published source shall bear an appropriate in-text citation and have a corresponding entry in the reference list/works cited.
5. The terms shall be sequenced in alphabetical order.
6. If the terms consist of more than one word, capitalize every major word.
7. The term to be defined shall be indented, typed in a bold face, and punctuated with a period. Two spaces shall separate the period from the definition.
8. Each definition shall be expressed in a complete sentence, NOT a phrase.
9. Symbols and abbreviations shall be enclosed in parentheses following their spelled-out nomenclatures.
10. See example on the next page.

Definition of Terms

Housing and Land Use Regulatory Board (HULRB). the agency that provides for the preparation and implementation of the comprehensive land use plans for local government units...

Pi(π). This term refers to a mathematical constant and a transcendental real number, approximately equal to 3.14159, which is the ratio of a circle's circumference to its diameter in Euclidean geometry, and has many uses in mathematics, physics, and engineering. In this study, the π was used to calculate...

Tables

1. Type above every table its number and title.
2. Type the table number at the center and triple-spaced from the last line of the immediately preceding paragraph.
3. Type the title of the table at the center, title case, and double-space from the table number, and triple-spaced to the table.
4. The numbering of tables shall be continuous.
5. Use the landscape page layout for large tables.
6. If the table is still too large to fit a single page, reduce the Arial font to a minimum of 8 points.
7. If the table does not fit the page even after the font-size reduction, continue the rest of its part to the next page, but the cut part shall bear the subtitle, 'Continuation' flush with the left margin (e.g., Continuation of Table 14). The cut part/s shall also show the column headings and the legend (if any) like those in the first part of the table
8. Put two or more small tables on a single page if the page is big enough to accommodate them all.
9. Have small tables appear on the same page along with the text; however, leave three spaces between every table and the texts above and below it.
10. The width of the table shall be dependent on the length of its title.
11. See example on the next page.

Chapter 4

RESULTS AND DISCUSSION

This chapter presents the results and the discussion to support the methodology utilized in the achievement of the objectives.

Table 1

Usability of the Web – Based Information Management System

Indicators	Weighted Mean	Verbal Interpretation
1. The system is easy to learn how to use.	4.50	Highly Acceptable
2. The system functions are easy to use.	4.75	Highly Acceptable
3. The system provides clear instructions to operate	4.60	Highly Acceptable
4. The system offers helpful error messages.	5.00	Highly Acceptable
5. The system allows users to complete tasks quickly	4.00	Acceptable
Overall Mean	4.57	Highly Acceptable

The evaluation of the web-based information management system's usability reveals that it generally meets high standards, with an overall mean score of **4.57**, interpreted as "**Highly Acceptable**." Users find the system user-friendly and efficient, particularly valuing the clear and helpful error messages, which received the highest mean score of 5.00. This aspect stands out as the most positively perceived element of the system's usability. However, the indicator with the lowest mean score of 4.00 was related to the system's ability to allow users to complete tasks quickly, suggesting that there is room for improvement in optimizing performance. Addressing this area could further enhance user satisfaction and elevate the overall user experience to an even higher level.

Figures

1. Type triple-spaced from the last line of the immediately preceding paragraph its figure number and title.
2. Type the title of the figure flush left, title case, and single space immediately after the figure number.
3. The numbering of figures shall be continuous.
4. If the title is long, align to the first word of the title the rest of the title.
5. Put two or more small figures on a single page if the page is big enough to accommodate them all.
6. Have small figures appear on the same page along with the text; however, leave three spaces between every figure and the texts above and below it.
7. See example on the next 3 pages.

Chapter 3

METHODOLOGY

This chapter presents the methodology used to address the problems and objectives outlined in the study.

Research Design

This study employs a descriptive research design with a developmental approach. The descriptive aspect focuses on understanding the existing manual information management system's limitations and how a web-based system can address these issues. The developmental approach involves the design, implementation, and evaluation of the web-based information management system.

Development Methodology

The development of the web-based Information Management system will follow the Software Development Life Cycle (SDLC) model, specifically using the Waterfall Model approach as shown on the Figure 1. This model includes the following phases.

Requirements Analysis. Gather and analyze requirements from stakeholders to understand the functionalities needed for the payroll system.

Design. Develop detailed system design specifications, including architectural design, data design, and interface design.

Implementation. Develop the system according to the design specifications. This phase includes coding, unit testing, and integration.

Testing. Conduct various tests to ensure the system meets the specified requirements and quality standards.

Deployment. Install and deploy the system in the production environment, ensuring it is fully operational.

Maintenance. Provide ongoing support and maintenance, including bug fixes, updates, and enhancements based on user feedback and changing requirements.

Figure 1. The Waterfall Model Approach

The Waterfall model offers a structured and linear approach to developing a web-based information management system, ensuring that each phase is completed before proceeding to the next. This method is especially beneficial for projects with well-defined requirements. The development process begins with **Requirements Gathering**, where detailed input is collected from stakeholders to form a comprehensive requirements specification document. This phase establishes a clear understanding of what the

information management system needs to achieve, such as managing information data, and ensuring compliance with information handling regulations.

Next is the **System Design** phase, which transforms the gathered requirements into a detailed blueprint for the system. This includes creating system architectures, designing the user interface, and selecting appropriate technologies. The resulting design document serves as a guide for developers, outlining how the system should be constructed to meet user needs and technical specifications. Following this, the **Implementation** phase involves actual coding, where developers build and integrate the software components according to the design specifications, resulting in a functional information management system.

The **Testing** phase ensures the system operates as intended by conducting thorough evaluations, including unit tests, system tests, and user acceptance testing. Any identified issues are addressed to guarantee the system's functionality and performance meet expectations. Once testing is completed, the **Deployment** phase involves launching the system on production servers, configuring it for optimal use, and training end-users. Finally, the **Maintenance** phase provides ongoing support to resolve any issues, implement updates, and continuously improve the system based on user feedback, ensuring long-term reliability and user satisfaction.

Overall, the Waterfall model's systematic approach ensures that the web-based information management system is developed efficiently, with each phase building upon the last to deliver a robust and user-friendly solution tailored to the clients' needs.

In – Text Citations

Use the American Psychological Association (APA) style in the in-text citation of capstone manuscript. When using APA format, follow the author-date method of in-text citation. This means that the author's last name and the year of publication for the source should appear in the text, like, for example, (Jones, 1998).

If you are referring to an idea from another work but NOT directly quoting the material, or making reference to an entire book, article or other work, you only have to make reference to the author and year of publication and not the page number in your in-text reference.

You can introduce the quotation with a signal phrase that includes the author's last name followed by the date of publication in parentheses. If you do not include the author's name in the text of the sentence, place the author's last name, the year of publication, and the page number in parentheses after the quotation.

Example:

According to Jones (1998), APA style is a difficult citation format for first-time learners. APA style is a difficult citation format for first-time learners (Jones, 1998).

On the other hand, if you are directly quoting or borrowing from another work, you should include the page number at the end of the parenthetical citation. Use the abbreviation "p." (for one page) or "pp." (for multiple pages) before listing the page number(s). Use an en dash for page ranges. For example, you might write (Jones, 1998, p. 199) or (Jones, 1998, pp. 199–201).

Example:

According to Jones (1998), "students often had difficulty using APA style, especially when it was their first time" (p. 199). Jones (1998) found "students often had difficulty using APA style" (p. 199); what implications does this have for teachers?

A Work by One Author

Kernis et al. (1993) suggest...

Reference List

Regardless of how they are referenced, all sources that are cited in the text must appear in the reference list after the last of Chapter 5 of the manuscript paper.

Articles in Periodicals

APA style dictates that authors are named with their last name followed by their initials; publication year goes between parentheses, followed by a period. The title of the article is in sentence-case, meaning only the first word and proper nouns in the title are capitalized. The periodical title is run in title case, and is followed by the volume number which, with the title, is also italicized. If a DOI has been assigned to the article that you are using, you should include this after the page numbers for the article. If no DOI has been assigned and you are accessing the periodical online, use the URL of the website from which you are retrieving the periodical.

Each reference shall be single-spaced with the first line typed flush with the left margin and the succeeding lines indented five spaces from the left margin.

References in APA publications are cited in text with an author-date citation system and are listed alphabetically in the reference list.

Format:

Author, A. A., Author, B. B., & Author, C. C. (Year). Title of article. *Title of Periodical*, volume number(issue number), pages. <https://doi.org/xx.xxx/yyyy>

Example:
